

Quick Start Guide

LOOPEREYE

Welcome to LOOPEREYE, your fully-featured highly-customisable smart looper. Get ready to take advantage of your new looping powers!

1. Set up the pedal

1. Attach the WiFi antenna, plug the power in, you should see the Status LED light up green.
2. Connect your instrument to the input and your amp to the output.
3. Once the LED turns blue, your pedal is ready to connect to the app.

2. Get the app

Download the app from Google Play (Android) or Apple (iOS).

3. Launch the app

Connect your phone to the **loopereye** WiFi network using the password **loopereye**, then launch the app. We recommend you personalise the network SSID/password, see user manual.

The app starts up the default session with 4-tracks. The first is selected and is shown highlighted. In the default session track 1 is used as the synchronisation source.

The app is interactive, meaning you can control the looper directly from your smart device.

4. Start recording

1. Use **FS2** to start and stop the recording of the selected track, notice the track status changes.
2. Use **FS3** to overdub on this track.
3. Use **FS1** to move to the next track and repeat the recording/overdub process.

To learn more about LOOPEREYE features, please refer to the user manual available from the app or on our website.
